

Add MySDS to app and mobile

Context

We want to connect the MySDS platform to Sofvie to make it easier for our to access the platform. Since it is a two way link, this could transform into sales on both ends.

Since the SDS module is missing in Sofvie, this link would make our platform look more robust.

As a user I want to have an SDS solution within the Sofvie platform so that I don't have to keep switching between different solutions and slow down or loose track of work in progress.

Solution

Web APP

In the web app, we need a new section in the main menu for the MySDS link and other links we might want to add in the future. The section has a header entitled "Modules"

```
<span class="mt-4 px-4 d-block font-weight-bolder" >MODULES</span>
```

As per Gus' request, instead of using a Font Awesome icon, use the MySDS logo attached. Please make sure the logo color, size and position matches the rest of the icons.

When clicking on the menu link, a fly-out opens containing a 650px wide iframe. The fly-out has a yellow close button that will allow the user to close the iframe when desired.

Place the iframe on the home page to allow the user to navigate through the site without impacting it.

Note: Currently we cannot use iframes (console error): "Refused to display 'https://mysds.ca/' in a frame because it set 'X-Frame-Options' to 'sameorigin'."

Note: For MVP we will just have a link to the MySDS login page in a new tab with no auto-login. The same applies for both mobile and web app links.

Credentials: We will need an env variable where we can define the login information for mysds.ca. This variable would include the username and password for the general access for the companies account at MySDS. If the user wants to switch credentials to do admin work they can log out of the account and log in with there credentials as required. The default will be to launch with the shared provisions.

Mobile

On the mobile application, add the MySDS button next to the Documents button. Give both the Documents and MySDS button the same look and functionality as the buttons above. The MySDS button will open the link in a new browser tab. Auto login should work like app.

Note: Mind the notification icon on the Documents button. Make sure it looks and works properly after the position/style update. In dark mode icon should change to white like all the other icons.
